Central Tendencay

Measures of Central Tendency:

- Mean, Median, and Mode are statistical measures that help us describe the behaviour of a collection of data points. Individual data points are lost in this picture.
  - Gives good idea about the whole of the dataset but not necessarily individual parts

- Median
  - The center number after listing the data from least to greatest
- Mode
  - The value in the dataset that appears the most frequently
    - You may also have a mode when considering NON numerical datasets
- Mean
  - Essentially the average of the dataset
  - Sum of values / number of values
